

Sports and Leisure trip

The trip was a good experience; I really enjoyed it because we had so many different activities and so much fun with Mr. Alan Earwaker.

The trip showed us how much fun we can have without television, internet, and cell phones. The trip taught us to enjoy life and take care of what we have before it's too late. The trip made me realize that I shouldn't take advantage of the earth as I do and not to harm trees, and many other living things. All of my class mates went back to their homes with a new perspective of our world.

Mr. Alan Earwaker showed us how to survive in the cold if something went wrong. He really loves teaching new things to others and he also learns from them too. It shows that he loves what he does, and I hope that he continues with these good experiences with other classes.

The global warming is becoming more and more frightening, there is shortage in water, and the pollution is getting worse. Some people don't realize this because they are not aware and only think of themselves and how they're going to get somewhere. They don't think that it's this bad, and if it continues like this the world become more and more unhealthy for my grand-daughters and grand-sons. People have been taking advantage of what we have.

The trip was a good experience and hopefully there will be many others. Thank-you for everything you have done for everyone.
